Comparative Study Of Low code Development Versus Traditional Application Development Ap

Aim:-

To Compare traditional application development and Lo Code Applications development based on theirs, advantages and disadvantages.

Features Of Traditional Vs Lowcode:

Traditional Development	Low-Code Development
* Required Programming knowledge.	* Minimal Coding Required.
* Developed Using Languages like Java, Python, C++, etc.	* Uses drag & drop interface.
* Longer development time	* faster Development time
* High flexibility & Customize time.	* Limited Customizations
* Suitable for Complex applications	* Suitable for Simple to medium business application.

Advantages of traditional Vs Low Code:

Traditional Development:

* Highly Customizable
* Suitable for Large and Complex Projects.
* Better Control over application design & Performa
* Supports advantage Integration

Low Code Development

i) Faster application Development
ii) Required Less Coding knowledge
iii) Reduces development Cost.
iv) Easy Maintainence & updates

Disadvantages of traditional Vs Low Code:

Traditional Development:

i) Time Consuming
ii) Requires Skilled developers
iii) Higher development & Maintainence Cost.
iv) Longer Testing & deployment Process.

Low Code Development:-

i) Low Code Customization
ii) Vendor Dependency
iii) May not be Suitable for highly complex application
iv) Licensing Costs for Enterprise Platform.

Comparison of traditional Vs Low Code

Traditional Development	Low Code Development
i) Takes more to develop application.	i) Develops applications Much faster.
ii) Requires Strong Programming Skills.	ii) Requires little or no Programming knowledge.
iii) Highly flexible & customizable.	iii) Limited Customization options
iv) Higher development & Maintenance.	iv) Lower development & Maintenance Cost.

RESULT:-

Traditional developments offers high flexibility and Customization while low Code developments Enables faster development with minimal Coding. The Suitable approach depends on the Projects requirements
