Exp:03 Survey Report On Emerging Trens In Low Code Application Development

Aim:

To Study the Emerging trends in Low-Code application development and Understand how Low-Code Platforms are Changing the Software development Process.

Introduction:-

Low Code Application development allows user to Create applications allows user to Create applications using Visual Interfaces, drag & drop Components minimal hand written Code.

Emerging Tools:-

1. AI Assisted Development:-

AI is increasingly used to generate Code, Workflows and application Components

2. Mobile application development:-

Low Code Platforms Provide tools for quickly Creating

3. Cloud-Based Development:-

Cloud Platform Enable app to be developed, deployed, and Managed online

4. Workflow automation:-

Buisness use Low Code tools to automate repititive tasks and business Process

5. Integration with API's :-

Modern Platform Provides Easy Integration with databases, API's and third Party Services.

6. Citizen Development :-

Non-Programmers Can Build Simple Buisness applications With minimal Coding knowledge.

Advantages :-

Fast Development, reduced Development Effort, Easier Maintainence rapid Prototyping, and improved Collabration between technical & non-technical users.

Conclusion :-

The integration of AI, Cloud Computing automation API's, and Citizen development is Expected to further increase the adoption of Low Code Platform.

RESULTS :-

The Emerging tools in Low-Code application development were Surveyed and their role in Simplifying and accelerating application development was Understood.
